The whole fab, floor by floor.

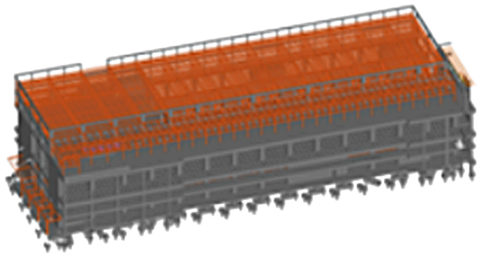

Roof, plenum, cleanroom, clean sub-fab and dirty fab: designed, built and maintained by one team.

1,050,000 m²

Of cleanroom built

One integrated solution.

Engineering, Procurement & Construction

Our EPC services cover the entire facility lifecycle, from engineering and design to construction, commissioning and maintenance.

Process Critical Utilities & Total Tools Installation Solutions

End-to-end EPC solutions for semiconductor facilities, from critical utilities to tool installations.

Six services. One roof, every stage.

01 Design & Consult

Engineering design across CSA and MEP, setting the spec.

02 Procure

Specification led procurement, managed around long lead items.

03 Build

Construction under a disciplined safety and quality regime.

04 Tools Hookup

Total tool installation and hook up, bringing the line to life.

05 Test & Commission

Systems and classification testing, verified to spec.

06 Maintain

Planned maintenance and energy care through the operating life.
