Three business units

Three units, one facility

IAQ is a Malaysian total facility solutions provider. For 31 years it has designed, built and maintained high technology facilities through three business units.

EPC

Engineering, procurement and construction

One contract for the cleanroom and the facility around it, from the first drawing to handover.

PCU & TTI

Process critical utilities and total tool installation

Builds the gas, chemical, water and exhaust systems, and connects each tool to them inside a running fab.

EFM

Energy facility management

Runs and maintains the chiller plant and HVAC that hold the cleanroom in spec, and cuts their energy use.

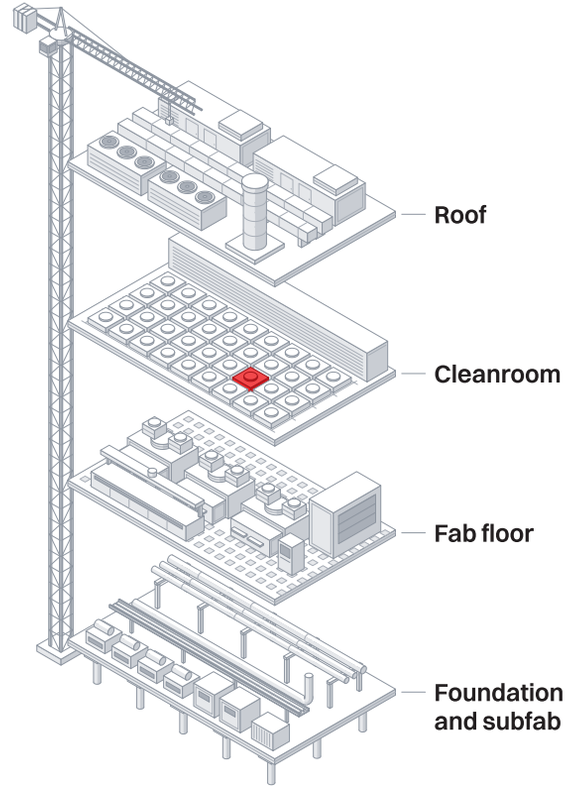

Seven markets

Semiconductor, Data Centre, EV Battery, Photovoltaics, District Cooling & Heating, Bio LifeScience and Food & Beverage

Cleanroom construction

The cleanroom, and the fab

The cleanroom and the whole facility around it, from the subfab to the roof plant, built by one team.

CSA

The building itself: piling and foundations, frame and roof, the cleanroom envelope and its finishes.

MEP

What makes it run: HVAC, ACMV and fan filter units, process cooling water, fire protection and power.

Process

What the tool runs on: clean dry air, specialty gases, ultrapure water, process vacuum and exhaust.

How the work runs

Six services, one cycle

Design, procurement, construction, commissioning, maintenance and tools hookup, run as one cycle by one team.

Design and consultation

Concept to detailed design, feasibility, permitting, BIM.

Procurement

Sourcing, tenders and long lead equipment, tracked in one system.

Construction

Site management, safety, quality, programme and cost.

Testing and commissioning

Proven to operate as intended, before handover.

Then, as the cycle continues

Maintenance

Planned care that protects lifespan and uptime.

Tools hookup

Production tools connected into the facility and released to production.
