

PRINT PREPARATION GUIDELINES

PPI / DPI

Very large-format print, e.g. 3 x 4 m and larger - 150 ppi

Large-format print, e.g. 2 x 4 m - 150 ppi

Small-format print up to 1 x 0.5 m - 300 ppi

Brochures, posters, etc. - 300 ppi

Colour

- All colours should be converted to the CMYK colour space.
- When printing with Pantone spot colours, the colours should be specified using the corresponding Pantone swatch names.
- Large areas of black in CMYK printing should be enriched with the other process colours.
- For maximum colour fidelity in print relative to the prepared artwork, we recommend working with the printer's colour profile: **Coated FOGRA39**.

Print-ready files

Print-ready files should be supplied in PDF format. Files supplied in other formats are assessed individually to determine whether they can be used for printing.

We do not review file content for formal or substantive correctness, nor do we verify the correct placement of the content included in the files.

Text

- All fonts in the file should be embedded or converted to outlines.

Images and graphics

- Photos and graphics should have a resolution of 300 ppi or higher.
